

ABSTRACT

Methods and a system are disclosed for insuring landscape architectural objects. According to an exemplary embodiment, a value associated with a landscape architectural object is determined. A change in the value of the object is determined
5 over a period of time. A risk-of-loss to the object is determined attributable to an eligible event that can occur over the time period. A cost of an indemnity against a loss to the object is determined from the eligible event over the time period based on the change in value and the risk-of-loss.
